Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13, 15-19 and 24-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Nigam et al.

Nigam et al disclose water based ink compositions comprising polymeric acids combined with polymeric bases, which bases may be PVP (abstract and column 7, line 23). These acid base pairs are taught as physically surrounding pigments, which pigments are seen as meeting applicants limitation to a filler. Applicants limitations to ash poor and flowable in an autoclave are seen as inherent to the compositions of the reference. To the extent that applicants claim 13 does not preclude the binder and the polyelectrolyte from being one and the same, the systems of the reference are seen as anticipating the rejected claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 20-21 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nigam et al.

Nigam et al disclose inks as discussed above. The reference fails to explicitly recite round particles or particle size or the use of the materials recited in claim 23. It is

Art Unit: 1714

the position of the examiner, however, that pigments such as the titanium dioxide taught by the reference would meet applicants round particle limitation are well known to have particle sizes down to nanoscale. Applicants recitation of metal in claim 23 is seen as obvious since metal pigments are notoriously well known in the art of special effects compositions.

Claims 14, 22 and 26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 27 is allowed.
